

The Hipparcos and Tycho Catalogues

ESA SP1200 June 1997

Volume 2

Clicking on a highlighted section will open the relevant PDF document.

[Contents listing and Foreword](#)

[Prologue](#)

[1. Overview of the Hipparcos Satellite](#)

- 1.1. Operating Principle
- 1.2. Constraints and Properties of the Nominal Orbit
- 1.3. Satellite Environmental Conditions
- 1.4. Attitude Control Concept
- 1.5. Data Handling and Processing
- 1.6. Operational Concept
- 1.7. Satellite Mechanical and Electrical Design
- 1.8. Ground Segment Overview

[2. The Payload: Overview and Optical Elements](#)

- 2.1. Introduction
- 2.2. Payload Configuration and Layout
- 2.3. Payload Hardware
- 2.4. Telescope Mirrors
- 2.5. Modulating Grid and Baffle Unit
- 2.6. Relay Lens Systems

[3. The Payload: Detectors, Electronics, and Structure](#)

- 3.1. Detectors
- 3.2. Payload Electronics and Mechanisms
- 3.3. Baffles
- 3.4. Payload Structure

Section B: Launch and Early Orbit Phases

4. Launch and Revised Mission Definition

- 4.1. Introduction
- 4.2. Operations Until Revised Mission Implementation
- 4.3. Apogee Boost Motor Failure Investigations
- 4.4. Revised Mission Definition
- 4.5. Ground Station Utilisation
- 4.6. Mission Planning
- 4.7. Orbit Manoeuvres and Commissioning Activities

5. Initial Payload Calibration

- 5.1. Calibration Plan
- 5.2. Detector Noise
- 5.3. Star Mapper Single-Slit Response
- 5.4. Initial Image Dissector Tube Piloting
- 5.5. Transverse and Longitudinal Offsets
- 5.6. Focusing
- 5.7. Instantaneous Field of View Profile
- 5.8. Chromaticity
- 5.9. Straylight

6. The Operational Orbit

- 6.1. Orbital Elements
- 6.2. Radiation Environment
- 6.3. Eclipses
- 6.4. Occultations
- 6.5. Ground Station Coverage
- 6.6. Perturbing Torques
- 6.7. Loss of Real-Time Attitude Determination
- 6.8. Micrometeoroids

7. Radiation Background and Related Effects

- 7.1. Introduction
- 7.2. The Radiation Environment in Space
- 7.3. Modelling the Radiation Dose Absorbed by the Satellite
- 7.4. Effects of the Radiation Background on the Mission

Section C: Interfaces with the Scientific Consortia

8. The Observation Programme and Interface with the INCA Consortium

- 8.1. Scanning Law
- 8.2. Star Observations
- 8.3. Input Catalogue Consortium Interfaces with ESOC
- 8.4. Programme Star File Generation
- 8.5. Modulation Strategy

9. Interfaces with the Data Reduction Consortia

- 9.1. Introduction
- 9.2. Data Distribution from ESOC to the Consortia
- 9.3. Data from FAST to ESOC in Support of Satellite Operations
- 9.4. Data from NDAC to ESOC in Support of Satellite Operations

Section D: Payload and Spacecraft Performances

10. Routine Calibration and Payload Evolution

- 10.1. Routine Monitoring Activities at ESOC
- 10.2. Payload Calibration
- 10.3. Focus Evolution
- 10.4. Photometric Evolution
- 10.5. Payload Modelling
- 10.6. Star Mapper Sensitivity during Suspended Operations

11. Solar Array Performance

- 11.1. Introduction
- 11.2. Power Subsystem Degradation
- 11.3. Solar Array Degradation
- 11.4. Eclipse-Induced Attitude Jitter

12. Thermal Control

- 12.1. Introduction
- 12.2. Heater Design
- 12.3. Payload Thermal Control History
- 12.4. Thermal Anomalies and the Basic Angle

Section E: Real-Time Attitude Control and Determination

13. Attitude and Orbit Control System and Performances

- 13.1. Functions of the Attitude and Orbit Control System
- 13.2. Equipment Description
- 13.3. Reaction Control Assembly
- 13.4. Inertial Reference Unit
- 13.5. Gyro Performances
- 13.6. Gyro Related Ground Investigations
- 13.7. Gas Consumption
- 13.8. Normal Mode Controller
- 13.9. Thruster Monitoring and Normal Mode Software Patch
- 13.10. Disturbance Torques
- 13.11. Real-Time Attitude Determination

14. Real-Time Attitude Determination with Three Gyros

- 14.1. Introduction and Overall Concept
- 14.2. On-Board Real-Time Attitude Determination using Three Gyros
- 14.3. On-Ground Real-Time Attitude Determination
- 14.4. Real-Time Attitude Determination Performance

15. Real-Time Attitude Determination with Two Gyros

- 15.1. Two-Gyro Operations Development History
- 15.2. Operational Requirements
- 15.3. On-Board Software
- 15.4. On-Ground Software
- 15.5. Operational Experience

16. Real-Time Attitude Determination with Zero Gyros

- 16.1. Activities during Suspended Operations
- 16.2. On-Board Software
- 16.3. On-Ground Software
- 16.4. Operational Experience

Section F: End of Mission

17. End of Mission Activities and Conclusions

- 17.1. End-of-Life History
- 17.2. End-of-Life Tests
- 17.3. Satellite Reliability Assessment
- 17.4. Data Archiving Policy
- 17.5. Miscellaneous Considerations
- 17.6. Overall Success of the Hipparcos Mission \line{Appendix A. The ESA-ESOC Operations Team

Appendices

[Appendix A. The ESA/ESOC operations team](#)

[Appendix B. Satellite Anomalies](#)

[Appendix C. References](#)

[Appendix D. Bibliography](#)
